Solutions for Tutorial Sheet 3

---

1. (a) $\lim_{n\to\infty} n^{\frac{1}{n}} = 1 \neq 0$.

   (b) $\lim_{n\to\infty} a_n = e^x \neq 0$.

   (c) Let $\{s_n\}$ be the sequence of partial sum of the series $\sum_{n=1}^{\infty} a_n$. Then $s_n = \log(n+1) \to \infty$ as $n \to \infty$ and hence diverges.

2. If $0 \leq a_n \leq 1$ $(n \geq 1)$ and $0 \leq x < 1$, then $|a_n x^n| \leq |x|^n$ for all n. Now use comparison test.

3. (a) Take $a_n = \dfrac{\log n}{n^{3/2}}$ and $b_n = \dfrac{1}{n^\alpha}$ where $1 < \alpha < \frac{3}{2}$. By limit comparison test series converges. (one can also use Cauchy condensation test i.e find the behaviour of the series $\sum 2^n a_{2^n}$.)

   (b) Take $b_n = \dfrac{1}{n}$. By limit comparison test series diverges.

   (c) Take $b_n = \dfrac{1}{n^2}$. By limit comparison test series converges.

4. (a) Take $a_n = \dfrac{n^{\sqrt{2}}}{2^n}$. Then $\lim_{n\to\infty} |\frac{a_{n+1}}{a_n}| = \frac{1}{2} < 1$. Hence series converges.

   (b) Take $a_n = \dfrac{n!}{10^n}$. Then $\lim_{n\to\infty} |\frac{a_{n+1}}{a_n}| = \infty > 1$. Hence series diverges.

   (c) Take $a_n = \dfrac{n!}{(2n+1)!}$. Then $\lim_{n\to\infty} |\frac{a_{n+1}}{a_n}| = 0 < 1$. Hence series converges.

5. (a) Conditionally convergent.

   (b) Absolutely convergent, as $|a_n| \leq \frac{1}{n^2}$.

   (c) Conditionally convergent.

6. (a) Let $a_n = (n + 1 + 2^n)x^n$. Then $\lim_{n\to\infty} |\frac{a_{n+1}}{a_n}| = 2|x|$ and series converges for $|x| < \frac{1}{2}$.

   (b) $\lim_{n\to\infty} |\frac{a_{n+1}}{a_n}| = \frac{|x|}{e}$, series converges if $|x| < e$.

   (c) $\lim_{n\to\infty} \sqrt[n]{|a_n|} = \lim_{n\to\infty} \left(\frac{n}{n+1}\right)^n |x-1| = \frac{|x-1|}{e}$, series converges if $\frac{|x-1|}{e} < 1$.

7. (a) Converges, $|a_n| \leq \frac{\pi}{2^n}$, use comparison test.

   (b) Converges, $|a_n| \leq \frac{1}{n^{3/2}}$.
